

Orders Dataset		
Missing Values		
Column Name	No. of Blanks	Missing %
order_id	0	0.00%
customer_id	0	0.00%
order_status	0	0.00%
order_purchase_timestamp	0	0.00%
order_approved_at	160	0.20%
order_delivered_carrier_date	1783	1.80%
order_delivered_customer_date	2965	3.00%
order_estimated_delivery_date	0	0.00%
Order Status Distribution		
Order Status	Order Count	Order %
delivered	96478	97.02%
shipped	1107	1.11%
canceled	625	0.63%
unavailable	609	0.61%
invoiced	314	0.32%
processing	301	0.30%
created	5	0.01%
approved	2	0.00%
Grand Total	99441	100.00%
Data Quality Check		
Data quality check	Result	Action
Missing values	3 columns contain missing date values	Assess impact based on order status
Duplicate order_id	0 duplicates	No action required
Delivered orders missing delivery date	8 orders	Exclude from delivery-time KPI
Invalid delivery timeline	0 invalid timeline	No action required
Summary		
The Orders dataset has generally strong data quality for order-level analysis. However, 8 delivered orders lack customer delivery dates and should be excluded from delivery-time KPI calculations.		

Reviews Dataset		
Missing Values		
Column Name	No. of Blanks	Missing %
order_id	0	0%
review_score	0	0%
Review Score Validation		
Review Score	Result	
Minimum	1	
Maximum	5	
Invalid score	0	
Review -> Order Relationship		
Check	Result	
Missing Order ids in Order	0	
Summary		
The Order Reviews dataset contains complete and valid review-score data. Review scores range from 1 to 5, with no invalid values. All review records are linked to valid orders, and no orders have multiple review records based on the validation performed. The dataset is suitable for analyzing the relationship between delivery delays and customer satisfaction.		

Customers Dataset		
Missing Values		
Column Name	No. of Blanks	
customer_id	0	
customer_city	0	
customer_state	0	
Orders -> Customers relationship		
Check	Result	
Orders with missing customer ma	0	
Data Quality Check		
Metric	Check	
Duplicate Customer IDs	0	
Blank Customer State	0	
Summary		
The Customers dataset is complete and consistent, with unique customer IDs and valid location data, making it suitable for regional delivery-delay analysis.
